Medications

Current Medications

| Medication | Drug Class(es) | Dates | Sig (Normalized) | Sig (Original) |
|---|-----------------------------|-------------------|-----------------------------------|----------------------------|
| atorvastatin 20 MG Oral Tablet (2 sources) | HMG-CoA Reductase Inhibitor | Start: 05-22-2019 | take 1 tablet by mouth once daily | Take 1 Tab by mouth daily. |

| Medication | Drug Class(es) | Dates | Sig (Normalized) | Sig (Original) |
|--|---|-------------------|--|---|
| CPAP MASK (2 sources) | | Start: 07-03-2012 | | A7034 cpap mask or nasal application device, A7035 headgear diagnosis obstructive sleep apnea |
| levothyroxine sodium 0.05 MG Oral Tablet (2 sources) | l-Thyroxine | Start: 12-29-2010 | take 1 tablet by mouth once daily | Take 1 Tab by mouth daily. |
| lisinopril 5 MG Oral Tablet (2 sources) | Angiotensin Converting Enzyme Inhibitor | Start: 10-22-2019 | take 1 tablet by mouth once daily | Take 1 Tab by mouth daily. |
| pantoprazole 40 MG Oral Granules (2 sources) | Proton Pump Inhibitor | | | Take 40 mg by mouth every 48 hours. |
| Semaglutide (OZEMPIC, 0.25 OR 0.5 MG/DOSE, SC) (1 source) | | | inject 0.5 mg by subcutaneous injection every week | 0.5 mg by Subcutaneous route once a week. |
| tadalafil 5 MG Oral Tablet (2 sources) | Phosphodiesterase 5 Inhibitor | Start: 11-03-2021 | take 1 tablet by mouth once daily | Take 1 Tablet by mouth daily. |
| 24 HR venlafaxine 75 MG Extended Release Oral Capsule (2 sources) | Serotonin and Norepinephrine Reuptake Inhibitor | | take 1 capsule by mouth once daily | Take 75 mg by mouth daily. |

Completed/Discontinued Medications

| Medication | Drug Class(es) | Dates | Sig (Normalized) | Sig (Original) |
|--|---------------------|--------------------------------------|------------------------------------|--|
| apixaban 5 MG Oral Tablet (2 sources) | Factor Xa Inhibitor | Start: 02-08-2021 End: 08-10-2022 | take 1 tablet by mouth twice daily | Take 1 Tablet by mouth 2 times daily. Indications: (Atrial Fibrillation) |

| Medication | Drug Class(es) | Dates | Sig (Normalized) | Sig (Original) |
|---|-------------------------|--------------------------------------|--|--|
| 24 HR metformin hydrochloride 500 MG Extended Release Oral Tablet (2 sources) | Biguanide | Start: 06-22-2020 End: 02-15-2022 | take 1 tablet by mouth once daily | Take 500 mg by mouth daily. |
| 24 HR metoprolol succinate 50 MG Extended Release Oral Tablet (2 sources) | beta-Adrenergic Blocker | Start: 12-08-2020 End: 03-21-2022 | take 1 tablet by mouth once daily | TAKE 1 TABLET BY MOUTH EVERY DAY |
| 12 HR propafenone hydrochloride 225 MG Extended Release Oral Capsule (3 sources) | Antiarrhythmic | Start: 01-14-2022 End: 04-21-2022 | take 1 capsule by mouth every twelve hours | Take 1 Capsule by mouth every 12 hours. |
| | | Start: 09-15-2020 End: 01-14-2022 | take 1 capsule by mouth every hour | TAKE ONE CAPSULE BY MOUTH EVERY TWELVE HOURS |

| ADULT TRANS ESOPHAGEAL ECHO COMPLETE on 02-17-2022 | | | | | |
| | <p>Transesophageal Echocardiography Report (TEE) Patient Name GARNER STEVEN L D.O.B. 01/31/1957 Patient ID (UPI) 01981868 Accession # P13397329 Indications: Atrial fibrillation. Study Date 02/15/2022 Type of Study: TEE procedure: Doppler , Color Doppler. Priority: Routine HR: 142 bpm BP: 125/94 mmHg Contrast Medium: Bubble Study. A complete transesophageal echocardiogram was performed. Sedation was performed by Anesthesiology. Probe was introduced after appropriate sedation and gargling and spray. No complications encountered. TEE was done in standard views, color Doppler, pulse and continuous wave Doppler interrogation was done. Transgastric imaging was performed. Conclusions Summary Findings 1. Left ventricle- Left ventricle appears to be normal in size and contraction. Contraction is irregular because of AFib, overall ejection fraction seems to be normal. 2. Left atrium- Left atrium may be dilated, there is no thrombus noted in the left atrial appendage. 3. Right atrium and right ventricle- Right atrium and right ventricle appear. 4. Mitral valve- There is mild central mitral regurgitation. 5. Aortic valve- Aortic valve is tricuspid without any evidence of aortic stenosis or regurgitation. 6.</p> | | | RESULTING AGENCY | 02-17-2022 17:57-0500 |

| Test Name | Value | Interpretation | Reference Range | Facility | Date Time |
|-----------|---|----------------|-----------------|--|--|
| | <p>Tricuspid valve- Tricuspid valve appears normal TR is noted. 7. Pulmonic valve- Pulmonic regurgitation is seen. 8. Interatrial septum.- The interatrial septum appears to be intact on anatomic evaluation. On injection of agitated saline contrast there is delayed transit of few bubbles. This suggests that there may be a small PFO but this was not clearly visualized. 9. Aorta- Mild plaque is noted in the proximal descending thoracic aorta.</p> <p>-----</p> <p>Electronically signed by Agarwal Yogesh K MD(Interpreting physician) on 02/17/2022 04:57 PM -----</p> <p>-----</p> <p>--- Demographics Age 65 Gender Male Race Caucasian Height Weight BMI Sonographer Williamson Amy Room 5 L Interpreting Agarwal Yogesh Referring Mehrotra Amit K Physician K MD Physician MD</p> | | | | |

| 01-28-2022 History of Present illness Narrative | <ul style="list-style-type: none"> Mehrotra, Amit Kumar, MD - 01/28/2022 9:15 AM CST: Formatting of this note is different from the original. <p>HEARTCARE MIDWEST OFFICE CONSULT</p> <p>Primary Care Physician: DANIELLE F KIM, DO</p> <p>ASSESSMENT & PLAN:</p> <p>In summary, Mr. Garner is a 64-year-old male with morbid obesity, obstructive sleep apnea, hypertension, hyperlipidemia, hypothyroidism, anxiety/depression, gastroesophageal reflux disease, and recurrent supraventricular tachycardia as well as atrial fibrillation.</p> <p>IMPRESSION:</p> <p>1. Supraventricular tachycardia and atrial fibrillation: He has required two emergency room visits, one in October 2014 and the other in March 2017 for treatment with intravenous adenosine. After IV adenosine was administered in March 2017, he was noted to have atrial fibrillation, which I think was a consequence of his supraventricular tachycardia and adenosine administration. Transthoracic echo performed in March 2017 demonstrated normal left ventricular function, no significant valvular abnormalities, and normal left atrial size. He had a normal stress echo on 11/03/2014.</p> <p>2. Atrial fibrillation: Propafenone sustained-release 225 mg b.i.d. was initiated at his initial clinic appointment in May 2017. He was already on Toprol-XL 50 mg daily and Eliquis 5 mg twice daily. With this regimen, he has had no recurrent palpitations. He self reduced propafenone to once daily and now has recurrent atrial fibrillation with rapid ventricular response.</p> <p>3. Long-term use of anticoagulation: CHA2DS2-VASc score is 1, accounting for hypertension. He was tolerating Eliquis 5 mg b.i.d. without bleeding complication. He reports self reducing Eliquis to once daily.</p> | <p>OSF HealthCare</p> <p>Work Phone: 1(309)655-2257</p> |

| Note Date & Type | Note | Facility |
|------------------|---|----------|
| | <p>4. Obesity: BMI back up to 61 from 60 previously.</p> <p>5. Obstructive sleep apnea: He is on CPAP.</p> <p>6. Hypertension: Blood pressure well controlled on current regimen.</p> <p>7. Hypothyroidism: He is on thyroid hormone supplementation.</p> <p>RECOMMENDATIONS/PLAN:</p> <p>Transthoracic echo and stress echo results reviewed as detailed above. Independent review performed today of 12 lead ECG demonstrating atrial fibrillation with rapid ventricular response.</p> <p>Mr. Garner was advised to resume twice daily dosing of Eliquis and propafenone. Eliquis 5 mg b.i.d. should be continued for stroke prophylaxis. Sustained release propafenone 225 mg should be taken b.i.d. as well. Twelve lead ECG will be performed in 1 week. If this continues to demonstrate atrial fibrillation with rapid ventricular response, TEE-guided cardioversion will be scheduled. One month follow-up to assess for maintenance of sinus rhythm and discuss long-term management.</p> <p>I have explained to the patient the risks, benefits, and alternatives to a Cardioversion. Potential risks or complications include but are not limited to anesthesia reactions, breathing problems, heart rhythm problems, complications from dislodged blood clots including stroke or pulmonary embolism, and skin burns. All questions were answered to the patient's satisfaction.</p> <p>Documentation was brought forward from my note on 9/2/2020. I have seen and examined the patient. Everything pasted or copy/forwarded was performed again today and changes were made as appropriate.</p> <p>Thank you for allowing us to participate in the care of this patient. Please feel free to call if you have any questions or concerns.</p> <p>HISTORY OF PRESENT ILLNESS:</p> <p>Chief Complaint Patient presents with Atrial Fibrillation 1 year return</p> <p>I had the pleasure of seeing Mr. Steven Garner in the Arrhythmia Clinic at OSF Cardiovascular Institute on 1/28/2022 for follow-up of his supraventricular tachycardia and atrial fibrillation.</p> | |

| Note Date & Type | Note | Facility |
|------------------|--|----------|
| | <p>As you are aware, Mr. Garner is a 64-year-old male with a past medical history of morbid obesity, obstructive sleep apnea, hypertension, hyperlipidemia, hypothyroidism, anxiety, depression, gastroesophageal reflux disease, and both supraventricular tachycardia and atrial fibrillation. He first presented with supraventricular tachycardia in October 2014 when he had sudden-onset palpitations while driving. He presented to the emergency room and intravenous adenosine was administered with successful restoration of sinus rhythm. He did well again until March 2017 when he again noted sudden-onset palpitations associated with diaphoresis, lightheadedness, and nausea while eating dinner. EMS was called, intravenous adenosine administered, and he was then noted to have atrial fibrillation at the time of arrival to the emergency room.</p> <p>Mr. Garner was initiated on therapy with apixaban and diltiazem in addition to his metoprolol. Diltiazem was eventually discontinued due to severe fatigue. I saw him for consultation on 5/26/2017. His fatigue had resolved since discontinuation of diltiazem, and he had no recurrent palpitations since that time. He presented to discuss further management options. Propafenone sustained-release 225 mg twice daily was added to his medical regimen. Discussion was held regarding the importance of weight loss and that he was not a good candidate for electrophysiology study and ablation unless he achieved meaningful weight loss. He presented on 6/29/2018 for a 1-year followup appointment. Although he had not lost any meaningful weight, he had no recurrent arrhythmia while on propafenone and Toprol-XL. He was tolerating Eliquis without complication. He presented on 9/4/2019 for another 1 year followup appointment and had remained arrhythmia free. Annual follow-up was performed on 9/2/2020. Palpitations remained well controlled on his current regimen. He had started a diet and lost 25 lb from his maximum weight of 420.</p> <p>No change in management was made. Mr. Gardner presents now for annual follow-up appointment. Been newly diagnosed with hypothyroidism. He also self reduced propafenone to once daily as well as Eliquis to once daily. Twelve lead ECG demonstrates atrial fibrillation with rapid ventricular response.</p> <p>Patient Active Problem List Diagnosis HTN (hypertension) OSA (obstructive sleep apnea) Obesity Proteinuria GERD (gastroesophageal reflux disease) Major depression GAD (generalized anxiety disorder) Hypothyroid</p> | |

| | <p>Component Value Date WBC 8.31 11/18/2021 HEMOGLOBIN 15.3 11/18/2021 HEMATOCRIT 46.9 11/18/2021 PLATELETCNT 253 11/18/2021</p> <p>Lab Results Component Value Date INR 1.0 03/20/2017</p> <p>Lab Results Component Value Date ALBUMIN 4.2 11/18/2021 ALKALINEPHO 52 11/18/2021 SGPTALT 35 11/18/2021 TOTALPROTEIN 7.6 11/18/2021</p> <p>12-lead electrocardiogram was performed on 5/26/2017 and personally reviewed. This demonstrated sinus rhythm with incomplete right bundle branch block. Sinus rate 77 beats per minute, PR interval 176 milliseconds, QRS duration 102 milliseconds, QT/QTc interval 388/439 milliseconds.</p> <p>12-lead electrocardiogram performed on 3/20/2017 was personally reviewed. This demonstrated atrial fibrillation with rapid ventricular response. Average ventricular rate 133 beats per minute.</p> <p>12-lead electrocardiogram performed on 10/21/2014 at 2:20 p.m. was reviewed. This demonstrated supraventricular tachycardia with an RSR prime pattern in V1 and inferolateral ST depressions. Ventricular rate 198 beats per minute.</p> <p>TTE 3/21/2017 Summary Technically difficult study due to poor quality of images. Definity contrast agent was used to enhance visualization of left ventricular endocardial borders. The left ventricle is grossly normal in size, wall motion and function. The left ventricular ejection fraction is 65-70%. Valves were poorly visualized but no significant valvular abnormalities noted. Normal left atrium. Right atrium not well visualized. Right ventricle is poorly visualized but appears normal in size and function.</p> <p>Treadmill Stress Echo 11/3/2014 Summary Normal stress echocardiogram.</p> | |

| Note Date & Type | Note | Facility |
|--------------------------------|--|---|
| | <p>Normal resting LV function and wall motion. Normal hyperdynamic response to exercise No stress-induced wall motion abnormalities were seen. No chest pain to 8.2 METs. Fair exercise tolerance limited by dyspnea. Normal stress ECG. Slightly sub-maximal heart rate response, limited by DOE, reduces test sensitivity.</p> <p>AMIT K MEHROTRA, MD, 1/28/2022, 9:17 AM CST</p> <p>Electronically signed by Mehrotra, Amit Kumar, MD at 01/28/2022 9:31 AM CST</p> <p>documented in this encounter</p> | |
